

MapInfo/Discover Training for Geologists

Introduction to MapInfo Professional / Discover for Geologists

Utilizing MapInfo Professional and Encom Discover software, the two-day course provides an introduction to the basics of GIS concepts and the elements of desktop mapping. MapInfo Professional and Encom software are recognized as current industry standards. The software combination, designed especially for the geosciences, provides the tools to effectively compile, visualize, analyze and map spatial geosciences data. The course consists of a series of lectures and hands-on exercises using geological data to build maps and visualize data. The lessons have been customized to allow participants to work with their own data sets and produce maps and data analysis which they can immediately implement. No MapInfo Professional experience is needed.

Intermediate MapInfo Professional / Discover for Geologists

This two-day course is ideal for geologists who are already familiar with the basics of the most current version of MapInfo Professional and Discover mineral exploration extension for MapInfo. The course consists of a series of lectures and hands-on exercises for clients wanting to get the most out of their surface sampling and downhole exploration data. The lessons will include various data presentation enhancements and analysis tools, advanced selection and object editing options and structural data. The course has been customized to allow participants to work with their own data sets and produce maps and data analysis which they can immediately implement.

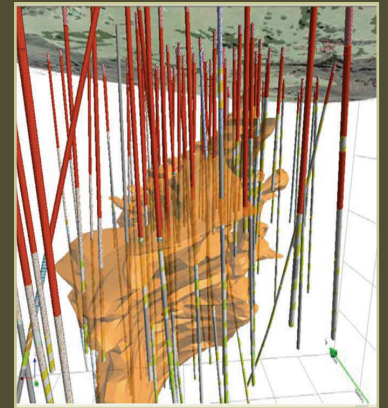

Discover 3D for Geologists

This course is geared towards introducing clients to the Discover 3D software application. The course will cover many of the Discover Drillhole and Surfaces Module options, preparing data for 3D viewing, through advanced 3D options such as Fly-Thru Animation and working with Voxel Models.

This course is recommended for clients already familiar with the concepts outlined in the previous MapInfo/Discover courses, specifically the Discover Drillhole Display, and Surface Creation utilities.

Courses are taught by a certified professional geologist with over 35 years experience in the minerals industry and 20 years working with GIS systems.

All courses meet American Institute for Professional Geologists PDP Sec D continuing education requirements

MapInfo Professional and Encom Discover are ready to use right out of the box. However, as with all software there is a learning curve. Maximize your time and software investment through a custom training course designed to provide geologists with an overview of the product capabilities as well as a thorough understanding of many advanced features.

Learn the skills you need to be efficient and productive with your software investment
